

1. Introduction

The purpose of this project is to develop a web-based application called Pastimes, an online second-hand clothing store. The system allows users to register, log in, and interact with a marketplace where second-hand branded clothing items can be bought and sold.

The application is built using PHP, MySQL, HTML, and a local server environment provided by XAMPP. The system is designed to be user-friendly, secure, and efficient, allowing both buyers and sellers to interact through a central platform.

2. System Overview

The web application consists of two main user roles:

- Users (Buyers/Sellers)
- Administrator

Key Features:

- User registration with validation
- Secure login system
- Admin verification of users
- Database storage using MySQL
- Session management
- Basic user approval system

3. Database Design

The system uses a MySQL database named: ClothingStore

Table :tlbuser

Field	type	description
userID	INT PK	Uniq user ID
fullName	VARCHAR(100)	user full name
email	VARCHAR (100)	user email
passwordHash	VARCHAR (255)	encrypted password
status	VARCHAR (20)	pending

4. System Functions

4.1 User Registration

- Users enter full name, email, and password
- Data is stored in the database
- Default status = pending

4.2 Login System

- Users log in using email and password
- Password is checked using MD5 hash
- Only verified users can access the system
- Sticky form keeps user input if login fails

4.3 Admin Functionality

- Admin can view all pending users
- Admin can:
- Approve users
- Delete users

- Approved users can log in

4.4 Session Handling

- Once logged in, user session is created
- System displays:
- “User John Doe is logged in”

5. User Interface Design

Pages created:

1. login.php

- Login form for users
- Displays login status messages

2. admin.php

- Displays pending users
- Approve / delete buttons

3. createTable.php

- Creates database table
- Loads sample data from text file

6. Data Captured

User Data:

- Full Name
- Email Address
- Password (hashed)
- Status (pending / verified)

3M

7. Actors in the System

User

- Registers account
- Logs in
- Waits for admin approval

Administrator

- Verifies users
- Deletes users
- Controls access

3M

8. Use Case Summary

- Register User
- Login User
- Approve User (Admin)
- Delete User (Admin)

9.project plan

Task	status
Database design	done
Table creation	done
Loigin system	done
Adimin system	done
Testing	done

11. Testing Summary

- Login tested with valid and invalid users
- Admin approval tested successfully
- Database connection tested using XAMPP
- Session tracking working correctly

12. Conclusion

The Pastimes web application successfully demonstrates a functional second-hand clothing system with user authentication and admin control. The system is simple, efficient, and meets all the basic requirements of the Portfolio of Evidence (POE).
